

DEKK Chain-on rubber pads have been designed and manufactured to be easily chained directly onto the track chain on excavators, skid steers and crawler carrier machines to help alleviate surface damage caused by steel tracks and improve overall machine performance. The core features and benefits of our Chain-on rubber pads include:

(Nuts and bolts included)

1 HEAVY DUTY RUBBER COMPOUND

Provides greater strength, increased wear resistance and reduced vibration and noise. Ideal for use in rail work applications to prevent rail damage on equipment dedicated to operating on sealed surfaces.

2 CHAIN ON STYLE

Enables the rubber pad to be bolted directly onto the track chain using track bolts rather than grouser plates, for quick and easy installation.

3 SOLID FORM STEEL CORE PLATE

A heavy duty rubber compound is fully molded around a solid steel core plate adding strength and reducing pad flex and delamination for improved pad performance and extended operating life.

4 TREAD PATTERNS DESIGNED FOR IMPROVED TRACTION

Reduces surface damage and negative impact to the environment.

5 ALL RUBBER PADS ARE PACKED IN SECURE BOXES

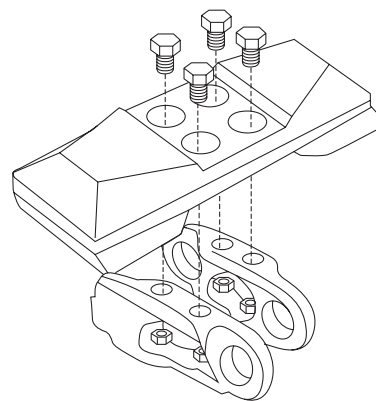

Packed in sets of two in clearly labelled boxes for ease of identification. Transport, delivery and handling is greatly improved.

TECHNICAL SPECIFICATIONS

Pad Width	300mm to 800mm
Style	Chain On
Core Bar	6mm to 16mm steel
Rubber Compound	Heavy duty, natural & synthetic fibre virgin rubber
Pad Life	3 to 5yrs*
Warranty	12mths

* Based on normal operating conditions of the equipment.

12 MONTH
FULL-REPLACEMENT
WARRANTY
ON ALL RUBBER PADS

GUARANTEED TO FIT
YOUR MACHINE
OR YOUR
MONEY BACK

The quality and performance of DEKK rubber pads is reinforced with our 12-month Full Replacement Warranty for all DEKK rubber pads sold Australia wide. In addition we also guarantee that they will fit your machine or your money back.
